Lecture 05
Lists and recursion

T. METIN SEZGIN

Announcements

1. etutor assignment all parts due on Sunday
2. Reading SICP 1.2 (pages 79-126)

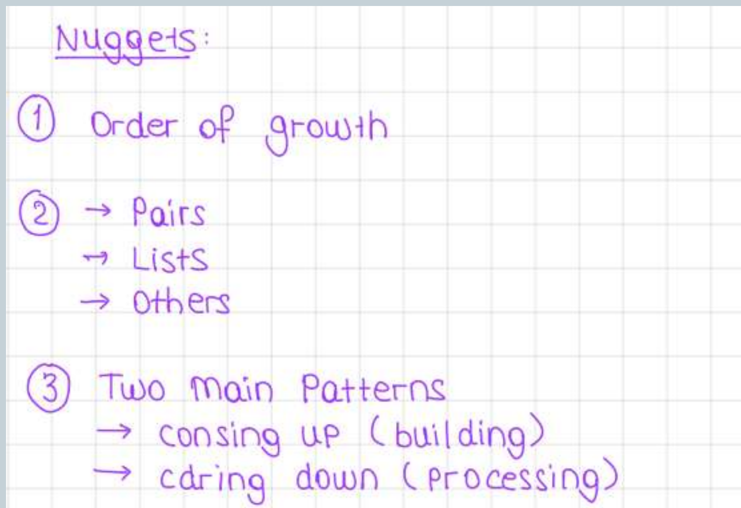
Lecture 04 – review
Structures and Patterns in Functional Programming

T. METIN SEZGIN

Lecture Nuggets

- Order of growth matters
- Support for compound data allows data abstraction
  - Pairs
  - Lists
  - Others
- Two main patterns when dealing with lists
  - Consing up – to build
  - Cdring down – to process

Lecture notes



Nuggets:

1. Order of growth
2. → Pairs
   → Lists
   → Others
3. Two main Patterns
   → consing up (building)
   → cdring down (processing)

- Ceren Tarim

Lecture notes

→ Pairs (cons cells)

(cons <x-exp> <y-exp>) => <p> (constructor)

<x-val> <y-val>

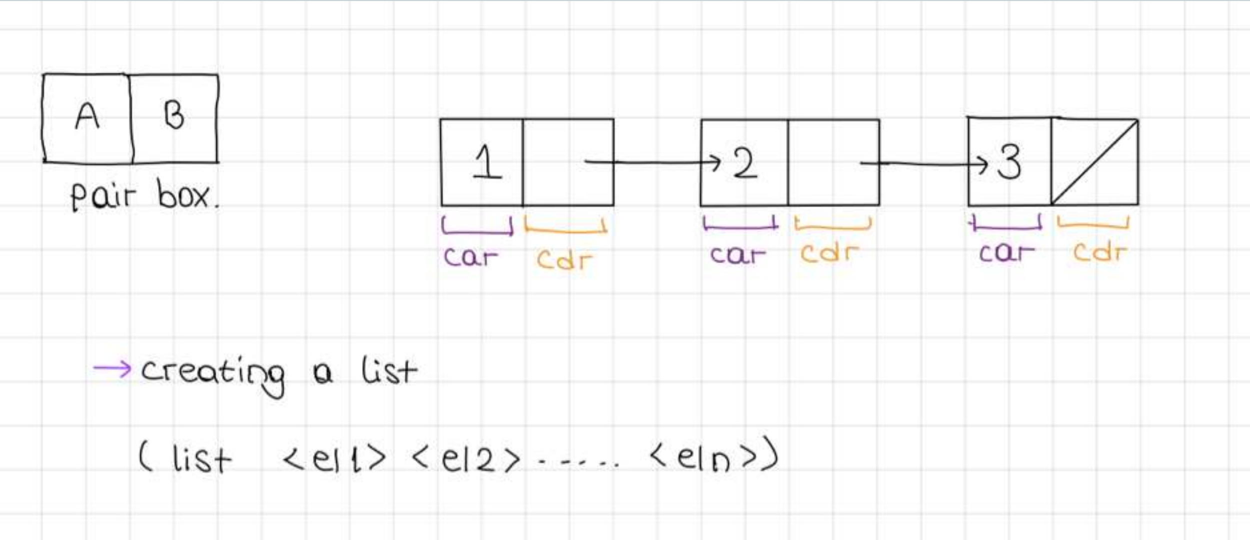
→ returns a pair <p> (accessor)

car-part ⇒ <x-val> ⟶ (car <p>)

cdr-part ⇒ <y-val> ⟶ (cdr <p>)

- Ceren Tarim

Lecture notes



- Ceren Tarim

Nugget

Support for compound data allows data abstraction

Lecture notes

Using pair abstractions to build procedures

```
(define p1 (make-point 1 2))
(define p2 (make-point 4 3))
(define strech-point (lambda (pt scale)
  (make-point (* scale (point-x pt))
              (* scale (point-y pt)))))

(strech-point p1 2) → (2 . 4)
p1 → (1.2)
```

Lecture 05
Lists and recursion

T. METIN SEZGIN

Lecture Nuggets

- Two main patterns when dealing with lists
  - Consing up – to build
  - Cdring down – to process
- Higher order procedures
- Three more patterns for lists
  - Transforming
  - Filtering
  - Accumulating

Nugget

Two patterns for dealing with lists

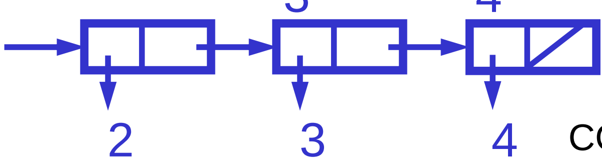
Common Pattern #1: cons'ing up a list

```
(define (enumerate-interval from to)
  (if (> from to)
      nil
      (adjoin from
              (enumerate-interval
                (+ 1 from)
                to))))
```

```
(e-i 2 4)
(if (> 2 4) nil (adjoin 2 (e-i (+ 1 2) 4)))
(if #f nil (adjoin 2 (e-i 3 4)))
(adjoin 2 (e-i 3 4))
(adjoin 2 (adjoin 3 (e-i 4 4)))
(adjoin 2 (adjoin 3 (adjoin 4 (e-i 5 4))))
(adjoin 2 (adjoin 3 (adjoin 4 nil)))
```

(adjoin 2 (adjoin 3 
))

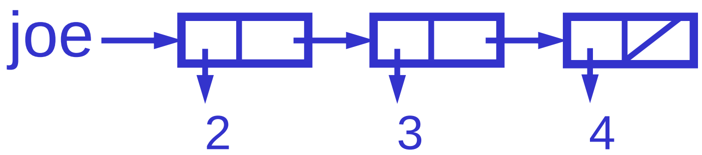
(adjoin 2 
)



==> (2 3 4)

Common Pattern #2: cdr'ing down a list

```
(define (list-ref lst n)
  (if (= n 0)
      (first lst)
      (list-ref (rest lst)
                (- n 1))))
```



```
(list-ref joe 1)
```

```
(define (length lst)
  (if (null? lst)
      0
      (+ 1 (length (rest lst)))))
```

Nugget

Higher order procedures

Other common patterns

- $1 + 2 + \ldots + 100 = (100 * 101)/2$ $\quad \sum_{k=1}^{100} k$
- $1 + 4 + 9 + \ldots + 100^2 = (100 * 101 * 201)/6$ $\quad \sum_{k=1}^{100} k^2$
- $1 + 1/3^2 + 1/5^2 + \ldots + 1/101^2 = \pi^2/8$ $\quad \sum_{k=1,odd}^{101} k^{-2}$

```
(define (sum-integers a b)
   (if (> a b)
       0
       (+ a (sum-integers (+ 1 a) b))))
(define (sum-squares a b)
   (if (> a b)
       0
       (+ (square a)
          (sum-squares (+ 1 a) b))))
(define (pi-sum a b)
  (if (> a b)
      0
      (+ (/ 1 (square a))
         (pi-sum (+ a 2) b))))
```

```
(define (sum term a next b)
  (if (> a b)
      0
      (+ (term a)
         (sum term (next a) next b))))
```

Let’s check this new procedure out!

```
(define (sum term a next b)
  (if (> a b)
      0
      (+ (term a)
         (sum term (next a) next b))))
```

A higher order procedure!!

What is the type of this procedure?

$$\underbrace{(\underbrace{\text{number} \rightarrow \text{number}}_{\text{procedure}},\ \text{number},\ \underbrace{\text{number} \rightarrow \text{number}}_{\text{procedure}},\ \text{number}) \rightarrow \text{number}}_{\text{procedure}}$$

Higher order procedures

- A higher order procedure:
  takes a procedure as an argument or returns one as a value

```
(define (sum-integers1 a b)
        (sum (lambda (x) x) a (lambda (x) (+ x 1)) b))
(define (sum-squares1 a b)
        (sum square a (lambda (x) (+ x 1)) b))
(define (pi-sum1 a b)
      (sum (lambda (x) (/ 1 (square x))) a
           (lambda (x) (+ x 2)) b))
```

```
(define (sum term a next b)
  (if (> a b)
      0
      (+ (term a)
         (sum term (next a) next b))))
```

Common Pattern #1: Transforming a List

```
(define (square-list lst)
  (if (null? lst)
      nil
      (cons (square (car lst))
            (square-list (cdr lst)))))

(define (double-list lst)
  (if (null? lst)
      nil
      (cons (* 2 (car lst))
            (double-list (cdr lst)))))
```

```
(define (square-list lst)
  (map square lst))

(define (double-list lst)
  (map (lambda (x) (* 2 x))
lst))
```

Common Pattern #1: Transforming a List

`Let's code it together.`

Common Pattern #1: Transforming a List

```
(define (square-list lst)
  (if (null? lst)
      nil
      (cons (square (car lst))
            (square-list (cdr lst)))))

(define (double-list lst)
  (if (null? lst)
      nil
      (cons (* 2 (car lst))
            (double-list (cdr lst)))))

(define (MAP proc lst)
  (if (null? lst)
      nil
      (cons (proc (car lst))
            (map proc (cdr lst)))))
```

```
(define (square-list lst)
  (map square lst))

(define (double-list lst)
  (map (lambda (x) (* 2 x))
lst))
```

Common Pattern #2: Filtering a List

```
(define (keep-it-odd lst)
 (cond ((null? lst) nil)
       ((odd? (car lst))
        (cons (car lst) (keep-it-odd (cdr lst))))
       (else (keep-it-odd (cdr lst)))))
```

```
> (filter odd? '(3 8 1 3 2 4 5 1 3))
(3 1 3 5 1 3)
>
```

Common Pattern #2: Filtering a List

`Let's code it together.`

Common Pattern #2: Filtering a List

```
(define (keep-it-odd lst)
 (cond ((null? lst) nil)
       ((odd? (car lst))
        (cons (car lst) (keep-it-odd (cdr lst)))
       (else (keep-it-odd (cdr lst)))))
```

```
  (define (filter pred lst)
    (cond ((null? lst) nil)
          ((pred (car lst))
           (cons (car lst)
                 (filter pred (cdr lst))))
          (else (filter pred (cdr lst)))))
```

Common Pattern #3: Accumulating Results

```
(define (add-up lst)
  (if (null? lst)
      0
      (+ (car lst)
         (add-up (cdr lst)))))

(define (mult-all lst)
  (if (null? lst)
      1
      (* (car lst)
         (mult-all (cdr lst)))))
```

```
> (reduce + 0 '(1 2 3 4 5))
15
>
```

Common Pattern #3: Accumulating Results

```
(define (add-up lst)
  (if (null? lst)
      0
      (+ (car lst)
         (add-up (cdr lst)))))

(define (mult-all lst)
  (if (null? lst)
      1
      (* (car lst)
         (mult-all (cdr lst)))))
```

```
(define (REDUCE op init lst)
  (if (null? lst)
      init
      (op (car lst)
          (reduce op init (cdr lst)))))

(define (add-up lst)
  (reduce + 0 lst))
```
