# Lecture 6 – Review Inductive Sets of Data & Recursive Procedures

T. METIN SEZGIN

Nugget

## Recursion is important

You need to get it right

## Recursion is important

- Recursion is important
  - Syntax in programming languages is nested
- Data definitions can be recursive
- Procedure definitions can be recursive

Nugget

We can define data recursively

## Defining list of integers

**Definition 1.1.3 (list of integers, top-down)** A Scheme list is a list of integers if and only if either

- 1. it is the empty list, or
- 2. it is a pair whose car is an integer and whose cdr is a list of integers.

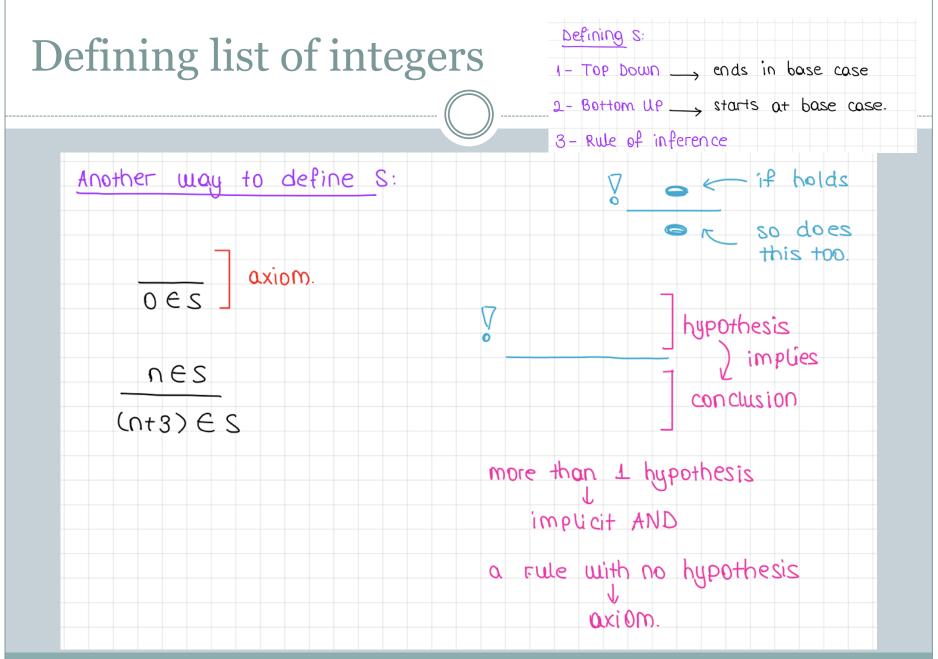

**Definition 1.1.4 (list of integers, bottom-up)** The set List-of-Int is the smallest set of Scheme lists satisfying the following two properties:

- 1. ()  $\in$  List-of-Int, and
- 2. if  $n \in Int$  and  $l \in List$ -of-Int, then  $(n \cdot l) \in List$ -of-Int.

Definition 1.1.5 (list of integers, rules of inference)

$$() \in \textit{List-of-Int}$$

$$\frac{n \in Int \quad l \in List\text{-}of\text{-}Int}{(n . l) \in List\text{-}of\text{-}Int}$$

Credit: Ceren Tarim

## Grammar example

#### Lambda Calculus

#### Definition 1.1.8 (lambda expression)

```
LcExp ::= Identifier

::= (lambda (Identifier) LcExp)

::= (LcExp LcExp)
```

where an identifier is any symbol other than lambda.

#### Concepts

- Variables
- Bound variable

## Grammar Example

```
Defining Sets Using Grammar:
     List - of - lnt := ()
                                                               tows are
                                                             productions.
    List - of - Int := (Int). List - of - Int)
    non-terminals
                                   terminal
                     is/can be
  -> Kleene Notation:
star \{\langle \exp \rangle\}^* \rightarrow \text{ indicates a sequence of instances (inc. 0)}
        \{\langle \exp \rangle \}^+ \rightarrow " " " one or more instances. 

\{\langle \exp \rangle \}^+ \rightarrow \text{sequence of any # of instances, seperated}
                             by ,.
```

Credit: Ceren Tarim

## Grammar Example

#### Definition 1.1.8 (lambda expression)

"bound ble" LcExp ::= Identifier::= (lambda (ldentifier) LcExp) := (LcExp LcExp)

where an identifier is any symbol other than lambda.

Credit: Ceren Tarim

## Lecture 7 Recursive Procedures

T. METIN SEZGIN

## Lecture Nuggets

- We can write programs recursively
  - We can apply the smaller sub-problem principle (wishful thinking)
  - Examples
- If needed we can make use of Auxiliary procedures
- Sometimes it is easier to write more general procedures

Nugget

## We can solve problems using recursion

## Deriving Recursive Programs

- Recursive programs are easy to write if you follow two principles
  - o Smaller-sub-problem principle (aka divide and conquer).
  - Follow the Grammar principle

#### The Smaller-Subproblem Principle

If we can reduce a problem to a smaller subproblem, we can call the procedure that solves the problem to solve the subproblem.

#### Follow the Grammar!

When defining a procedure that operates on inductively defined data, the structure of the program should be patterned after the structure of the data.

## Recursive Procedure Example

- Write a new function list-length
- Everyone should be able to go this far

• Let the definition of list guide you

```
List ::= () | (Scheme value . List)
```

```
list-length : List \rightarrow Int
usage: (list-length l) = the length of l
(define list-length
   (lambda (lst)
        (if (null? lst)
        0
        ...)))
```

## Another Example

#### Implement occurs-free?

occurs-free?

The procedure occurs-free? should take a variable var, represented as a Scheme symbol, and a lambda-calculus expression exp as defined in definition 1.1.8, and determine whether or not var occurs free in exp. We say that a variable occurs free in an expression exp if it has some occurrence in exp that is not inside some lambda binding of the same variable.

#### Such that

```
> (occurs-free? 'x 'x)
#t
> (occurs-free? 'x 'y)
#f
> (occurs-free? 'x '(lambda (x) (x y)))
#f
> (occurs-free? 'x '(lambda (y) (x y)))
#t
> (occurs-free? 'x '((lambda (x) x) (x y)))
#t
> (occurs-free? 'x '(lambda (y) (lambda (z) (x (y z)))))
#t
```

### The rules of occurs-free?

```
> (occurs-free? 'x 'x)
#t
> (occurs-free? 'x 'y)
#f
> (occurs-free? 'x '(lambda (x) (x y)))
#f
> (occurs-free? 'x '(lambda (y) (x y)))
#t
> (occurs-free? 'x '((lambda (x) x) (x y)))
#t
> (occurs-free? 'x '((lambda (y) (lambda (z) (x (y z)))))
#t
```

- If the expression e is a variable, then the variable x occurs free in e if and only if x is the same as e.
- If the expression e is of the form (lambda (y) e'), then the variable x occurs free in e if and only if y is different from x and x occurs free in e'.
- If the expression e is of the form (e<sub>1</sub> e<sub>2</sub>), then x occurs free in e if and only if it occurs free in e<sub>1</sub> or e<sub>2</sub>. Here, we use "or" to mean inclusive or, meaning that this includes the possibility that x occurs free in both e<sub>1</sub> and e<sub>2</sub>. We will generally use "or" in this sense.

#### The Smaller-Subproblem Principle

If we can reduce a problem to a smaller subproblem, we can call the procedure that solves the problem to solve the subproblem.

#### Follow the Grammar!

When defining a procedure that operates on inductively defined data, the structure of the program should be patterned after the structure of the data.

The grammar

```
LcExp ::= Identifier

::= (lambda (Identifier) LcExp)

::= (LcExp LcExp)
```

```
occurs-free? : Sym \times LcExp \rightarrow Bool
         returns #t if the symbol var occurs free
usage:
         in exp, otherwise returns #f.
(define occurs-free?
  (lambda (var exp)
    (cond
       ((symbol? exp) (eqv? var exp))
       ((eqv? (car exp) 'lambda)
        (and
          (not (eqv? var (car (cadr exp))))
          (occurs-free? var (caddr exp))))
      (else
         (or
           (occurs-free? var (car exp))
           (occurs-free? var (cadr exp))))))))
```

Nugget

## If needed, we can use auxiliary procedures

#### subst

#### subst

The procedure subst should take three arguments: two symbols, new and old, and an s-list, slist. All elements of slist are examined, and a new list is returned that is similar to slist but with all occurrences of old replaced by instances of new.

```
> (subst 'a 'b '((b c) (b () d)))
((a c) (a () d))
```

#### The Smaller-Subproblem Principle

If we can reduce a problem to a smaller subproblem, we can call the procedure that solves the problem to solve the subproblem.

#### Follow the Grammar!

When defining a procedure that operates on inductively defined data, the structure of the program should be patterned after the structure of the data.

The grammar

```
S-list ::= (\{S-exp\}*)
S-exp ::= Symbol | S-list
```

```
S-list ::= ()

::= (S-exp . S-list)

S-exp ::= Symbol | S-list
```

```
subst : Sym × Sym × S-list → S-list
(define subst
   (lambda (new old slist)
        ...))

subst-in-s-exp : Sym × Sym × S-exp → S-exp
(define subst-in-s-exp
   (lambda (new old sexp)
        ...))
```

The grammar

```
S-list ::= (\{S-exp\}*)
S-exp ::= Symbol | S-list
```

```
S-list ::= ()

::= (S-exp . S-list)

S-exp ::= Symbol | S-list
```

The grammar

```
S-list ::= (\{S-exp\}*)
S-exp ::= Symbol | S-list
```

```
S-list ::= ()

::= (S-exp . S-list)

S-exp ::= Symbol | S-list
```

The grammar

```
S-list ::= (\{S-exp\}*)
S-exp ::= Symbol | S-list
```

```
S-list ::= ()

::= (S-exp . S-list)

S-exp ::= Symbol | S-list
```

```
subst-in-s-exp : Sym × Sym × S-exp → S-exp
(define subst-in-s-exp
  (lambda (new old sexp)
        (if (symbol? sexp)
             (if (eqv? sexp old) new sexp)
                  (subst new old sexp))))
```

## Things to note

- The procedures are mutually recursive
- The trick of decomposing procedures for each syntactic type is important
  - Simplifies our design

```
S-list ::= ()

::= (S-exp . S-list)

S-exp ::= Symbol | S-list
```

## Take home message

## Follow the Grammar

#### More precisely:

- Write one procedure for each nonterminal in the grammar. The procedure will be responsible for handling the data corresponding to that nonterminal, and nothing else.
- In each procedure, write one alternative for each production corresponding to that nonterminal. You may need additional case structure, but this will get you started. For each nonterminal that appears in the right-hand side, write a recursive call to the procedure for that nonterminal.

Nugget

## Sometimes it is easier to write more general procedures

### A more complex example

- Consider the procedure number-elements
- This procedure should take a list  $(\mathbf{v}_0 \ \mathbf{v}_1 \ \mathbf{v}_2 \ \dots)$  and return  $((0 \ \mathbf{v}_0) \ (1 \ \mathbf{v}_1) \ \dots))$ .
- Remember the grammar
- The problem

- S-list ::= () ::= (S-exp . S-list) S-exp ::= Symbol | S-list
- O No obvious way to build (number-elements 1st) from (number-elements (cdr 1st))
- The solution
  - Implement something more general
  - o Implement number-elements-from

 $\mathbf{number-elements-from} \; : \; \mathit{Listof}(\mathit{SchemeVal}) \; \times \; \mathit{Int} \; \rightarrow \; \mathit{Listof}(\mathit{List}(\mathit{Int}, \mathit{SchemeVal}))$ 

#### number-elements-from

 $number-elements-from: List of (Scheme Val) \times Int \rightarrow List of (List (Int, Scheme Val))$ 

- How are the arguments different?
- What purpose do they serve?
  - Input list
  - Context argument (inherited attribute)

## The take home message

## Follow the grammar

When following the grammar doesn't help...

Generalize

## Another example

• Consider list-sum

- How about vector sum?
- You can't take cdr of vectors!

## Follow the grammar

When following the grammar doesn't help...

Generalize

#### vector-sum

```
\begin{array}{lll} \textbf{partial-vector-sum} &: \textit{Vectorof}(Int) \times \textit{Int} \rightarrow \textit{Int} \\ \textbf{usage:} & \text{if } 0 \leq n < \textit{length}(v)\text{, then} \\ & & & & & & & & \\ & & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & \\ & & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & \\ & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & & \\ & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & &
```

```
\begin{array}{lll} \textbf{vector-sum} &: \textit{Vectorof}(Int) &\to \textit{Int} \\ & & & & & \\ & & & & \\ \textbf{usage:} & (\texttt{vector-sum} \ v) &= & \sum_{i=0}^{i=length(v)-1} v_i \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & & \\ & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & &
```
